New Data on “Trump Flip” Voters

By Alan Tonelson

Back in September, I published a piece challenging claims that President Trump is a phony populist by analyzing government data indicating that a key portion of his 2016 supporters – Americans who had twice voted for his White House predecessor, Barack Obama, before defecting to Trump World – had overall seen highly impressive gains in their annual paychecks under his administration. The evidence came from Commerce Department figures reporting on annual salary trends in the 196 counties that have voted Obama-Obama-Trump in 2008, 2012, and 2016.

Recently, Commerce issued a new set of statistics permitting the issue to be examined according to another gauge – economic growth adjusted for inflation.

The Role of the Whistleblower

While the vast majority of whistleblowers earn less notoriety, their impact has been profound and has resulted in a variety of workplace safety, product safety, environmental protections, and financial integrity measures that we may take for granted.
