

# Rainfall crisis Pain

The Moroccan cities suffers from submerged as a result of extreme Rainfall every winter.

# The rains crisis in the Moroccan streets

The trains submerge every winter

# The current solution

Rescue vans can't face the water effectively.

They take a long time to solve this problem.

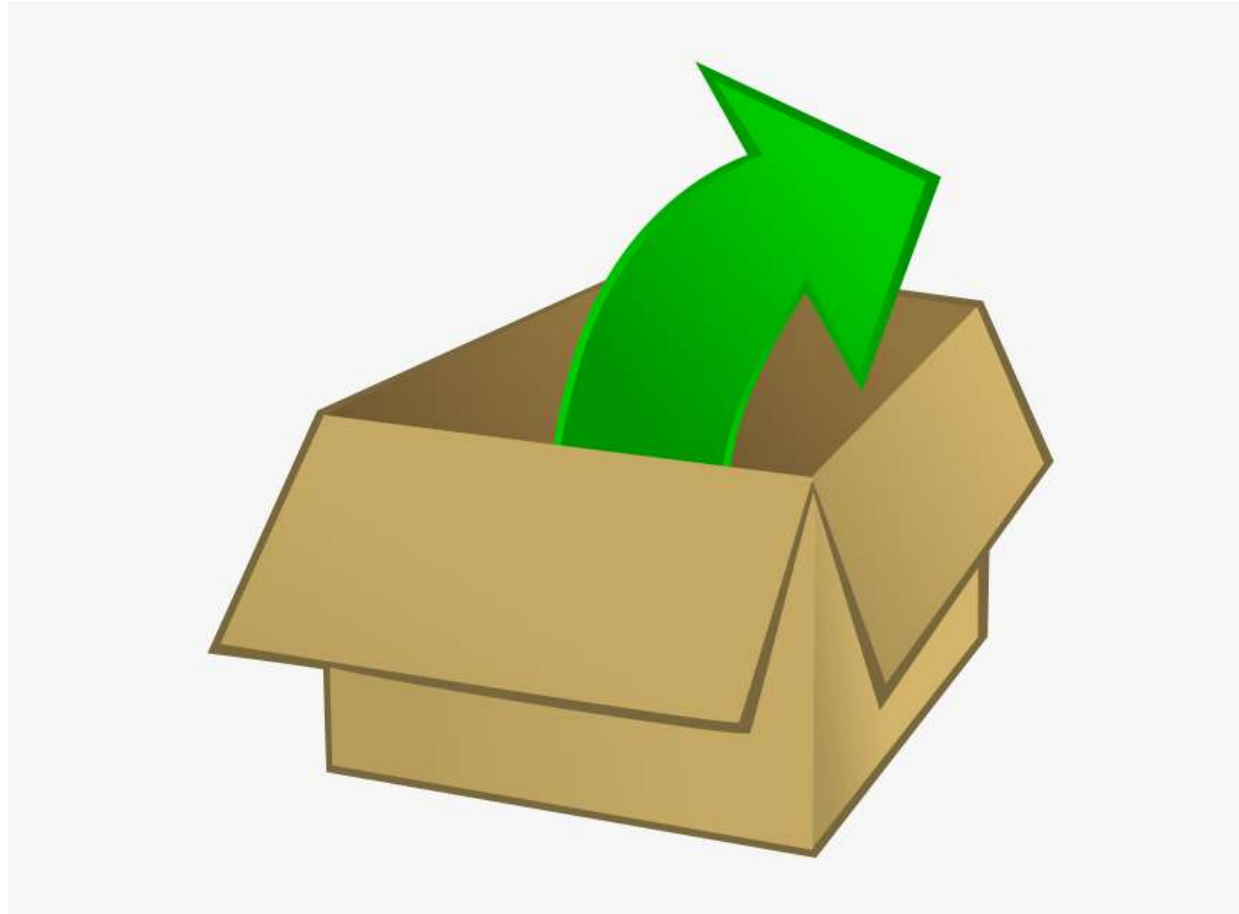

# Infrastructure

The original solution is building Infrastructure and rain drainage nets.

This costs billions dollars and take a long time.

The solution is out Box

# Megamaa Material

It is a mixture of fluidizing materials and its source is limestone powder (calcium chloride) and natural rock powder containing magnesium chloride and zinc chloride, environmentally friendly and water-absorbent that reduces excess water and thus reduces the damages resulting from rainfall.

# The Using Method

Throwing the materials in a large quantity on the streets, tunnels and any place suffer from submerge like a seeds before rains fall.

Thank you
